ASCO Guidelines

Chemotherapy and Targeted Therapy for Women With HER2–Negative (or unknown) ABC: ASCO Clinical Practice Guideline.

Endocrine Therapy for Hormone Receptor Positive Metastatic Breast Cancer: ASCO Clinical Oncology Guideline.

1. Endocrine therapy is preferable to chemotherapy as first-line treatment for patients with ER+ MBC unless improvement is medically necessary (eg, immediately life-threatening disease).
 - Evolving use of targeted agents: palbociclib, everolimus, others
2. Single agent chemotherapy is preferable to combination; longer duration improves outcome but must be balanced against toxicity.
 - There is no single optimal 1st or subsequent line chemotherapy; choice of treatment will be determined by multiple factors including prior therapy, toxicity, performance status, comorbid conditions, and patient preference.
 - The role of bevacizumab remains controversial. Other targeted therapies have not so far been shown to enhance chemotherapy outcome in HER2-negative BC
3. HER2+ MBC separate topic.

Meme Kanseri Moleküler Alt Gruplara Göre Tedavi

ESO-ESMO Konsensus Kılavuzu

Guideline statement	LoE	Consensus
VISCERAL CRISIS is defined as severe organ dysfunction as assessed by signs and symptoms, laboratory studies, and rapid progression of disease. Visceral crisis is not the mere presence of visceral metastases, but implies important visceral compromise leading to a clinical indication for a more rapidly efficacious therapy, particularly since another treatment option at progression will probably not be possible.	Expert opinion	95.0% (38) Yes 5.0% (2) Abstain (40 voters)

ENDOCRINE THERAPY FOR RECURRENT OR STAGE IV DISEASE

Premenopausal Patients

- Selective ER modulators or ovarian ablation/suppression plus endocrine therapy as for postmenopausal women.

Postmenopausal Patients

- Non-steroidal aromatase inhibitor (anastrozole, letrozole)
- Steroidal aromatase inactivator (exemestane)
- Exemestane + everolimus¹
- Palbociclib + letrozole²
- Palbociclib + fulvestrant (category 1)³
- Fulvestrant⁴
- Tamoxifen or toremifene
- Megestrol acetate
- Fluoxymesterone
- Ethinyl estradiol

DEFINITION OF MENOPAUSE

Clinical trials in breast cancer have utilized a variety of definitions of menopause. Menopause is generally the permanent cessation of menses, and as the term is utilized in breast cancer management includes a profound and permanent decrease in ovarian estrogen synthesis. Reasonable criteria for determining menopause include any of the following:

- Prior bilateral oophorectomy
- Age ≥ 60 y
- Age < 60 y and amenorrheic for 12 or more months in the absence of chemotherapy, tamoxifen, toremifene, or ovarian suppression and follicle-stimulating hormone (FSH) and estradiol in the postmenopausal range
- If taking tamoxifen or toremifene, and age < 60 y, then FSH and plasma estradiol level in postmenopausal ranges

It is not possible to assign menopausal status to women who are receiving an LHRH agonist or antagonist. In women premenopausal at the beginning of adjuvant chemotherapy, amenorrhea is not a reliable indicator of menopausal status as ovarian function may still be intact or resume despite anovulation/amenorrhea after chemotherapy. For these women with therapy-induced amenorrhea, oophorectomy or serial measurement of FSH and/or estradiol are needed to ensure postmenopausal status if the use of aromatase inhibitors is considered as a component of endocrine therapy.

Targeted Therapy Pathways For ER+ Advanced Breast Cancer.

HR pozitif, HER2 negatif Metastatik Meme Kanserinde Tedavi

Cyclin Dependent Kinase 4/6 Inhibitors

Role in HR+ breast cancer

- Growth of HR+ BC depends on cyclin D1, a transcriptional target of ER
- Cyclin D1 activates CDK 4/6 causing G1-S phase transition and cell cycle entry

Major area drug development

- Palbociclib
- Abemaciclib
- Ribaciclib

HR pozitif, HER2 negatif Metastatik Meme Kanserinde Tedavi

The Role of CDK4/6 in HR+ Breast Cancer

- Rb binding inactivates E2F, which regulates genes important for transition through the G1/S cell cycle restriction point^{1,2}
- Phosphorylation of Rb by CDK4/6 leads to dissociation of E2F from Rb and cell cycle progression^{1,2}
- Increased CDK4/6 activity driven by perturbations of other pathways is associated with endocrine therapy resistance^{1,2}

HR pozitif, HER2 negatif Metastatik Meme Kanserinde Tedavi

Selective CDK 4/6 Inhibitors

Abemaciclib

Palbociclib

Ribociclib

CONFIRM – PROGRESYONSUZ SAĞKALIM

Fulvestrant 500mg progresyon riskini 250mg'a göre anlamlı olarak

%20 azaltır.

Risk altındaki hastalar:

	0	4	8	12	16	20	24	28	32	36	40	44	48
500 mg	362	216	163	113	90	54	37	19	12	7	3	2	0
250 mg	374	199	144	85	60	35	25	12	4	3	1	1	0

Table 1. Clinical and Pathological Characteristics of the Patients.*

Characteristic	Palbociclib-Fulvestrant (N= 347)	Placebo-Fulvestrant (N= 174)
Age		
Median — yr	57	56
Range — yr	30–88	29–80
<65 yr — no. (%)	261 (75.2)	131 (75.3)
≥65 yr — no. (%)	86 (24.8)	43 (24.7)
Race — no. (%)†		
White	252 (72.6)	133 (76.4)
Asian	74 (21.3)	31 (17.8)
Black or other	20 (5.8)	9 (5.2)
Hormone-receptor status — no. (%)		
ER-positive and PR-positive	238 (68.6)	111 (63.8)
ER-positive and PR-negative	91 (26.2)	48 (27.6)
ECOG performance status — no. (%)‡		
0	207 (59.7)	115 (66.1)
1	140 (40.3)	59 (33.9)
Disease-free interval§		
Median — mo	48	51
≤24 mo — no./total no. (%)	42/235 (17.9)	23/124 (18.5)
>24 mo — no./total no. (%)	186/235 (79.1)	95/124 (76.6)
Menopausal status at study entry — no. (%)		
Premenopausal or perimenopausal	72 (20.7)	36 (20.7)
Postmenopausal	275 (79.3)	138 (79.3)
Documented sensitivity to prior hormonal therapy — no. (%)¶		
Yes	274 (79.0)	136 (78.2)
No	73 (21.0)	38 (21.8)
Visceral metastasis — no. (%)	206 (59.4)	105 (60.3)
Measurable disease — no. (%)	268 (77.2)	138 (79.3)
Disease stage at study entry — no. (%)**		
Recurrent locally advanced††	49 (14.1)	25 (14.4)
Metastatic	296 (85.3)	146 (83.9)
No. of disease sites — no. of patients (%)‡‡		
1	111 (32.0)	60 (34.5)
2	99 (28.5)	50 (28.7)
≥3	135 (38.9)	62 (35.6)
Prior endocrine therapy — no. (%)§§		
Aromatase inhibitor with or without GnRH agonist	296 (85.3)	151 (86.8)
Tamoxifen with or without GnRH agonist	211 (60.8)	104 (59.8)
Most recent therapy — no. (%)		
Aromatase inhibitor with or without GnRH agonist	238 (68.6)	118 (67.8)
Tamoxifen with or without GnRH agonist	63 (18.2)	30 (17.2)

HR positif, HER2 negatif Metastatik Meme Kanserinde Tedavi-PALOMA 3

Figure 2. Subgroup Analysis of Progression-free Survival.

The blue boxes represent the hazard ratios with 95% confidence intervals (horizontal lines); the size of each box is proportional to the size of the corresponding subgroup. ER denotes estrogen receptor, and PR progesterone receptor.

HR pozitif, HER2 negatif Metastatik Meme Kanserinde Tedavi

Efficacy of Palbociclib and Fulvestrant in Patients with mBC and ESR1 Mutations

- N = 395 patients with successful ESR1 mutation analysis from PALOMA-3 trial
- ESR1 mutations were strongly associated with acquired resistance to prior aromatase inhibitors

	Median PFS (months)		
	Palbociclib + fulvestrant	Placebo + fulvestrant	HR (p-value)
ESR1-positive (n = 67; 39)	9.4	4.1	0.524 (0.0052)
ESR1-negative (n = 198; 91)	9.5	3.8	0.438 (<0.0001)

- Palbociclib offers high efficacy regardless of ESR1 mutation status

Tedavi Seçenekleri

HR+, HER2- negatif, yeni kemik metastazı olan, belirgin semptomu olmayan , 1 basamak hormon tedavisi sonrası kadın hasta, ECOG PS0-1 hasta

1- RT sonrası,tekli kemoterapi(paklitaksel), Zolendronik asid/ Denasumumab

2-RT sonrası, kombine kemoterapi(CAF), Zolendronik asid /Denasumumab

3-RT+Exemestane+ Denasumumab/Zolendronik asid

4-RT+ Exemestane+Everolimus+ Denasumumab/Zolendronik asid

5-RT+Fulvestrane+paclociclib+Denasumumab/Zolendronik asid

6-RT+Fulvestran+zolendronik asid

PET-CT; 3. Ay Yanıt değerlendirmesi

3. Aylık PET-CT kontrolde;

☐ Sağ aksila lenf nodunun gözlenmediği

☐ kemik metastazlarında belirgin regresyon saptandı

HR+, HER2- ,Yaygın Kemik metastazı olan Meme Kanseri 2. Basamak Tedavi

- ☐ Fulvestran 500 mg yükleme dozu sonrası(1, 14, 28. gün), 28 günde bir başlandı
- ☐ Zolendronik asid 4 mg/ 28 gün devam edildi
- ☐ 3. Aylık PET-CT kontrolde; Sağ aksila lenf nodunun gözlenmediği, kemik metastazlarında belirgin regresyon saptan
- ☐ Hasta 6. ayında progresyonsuz izleniyor

HR pozitif, HER2 negatif Metastatik Meme Kanserinde Tedavi

Endocrine Rx Algorithm in HR+/HER2-

HR pozitif, HER2 negatif Metastatik Meme Kanserinde Tedavi

neoMONARCH: A Phase II Neoadjuvant Trial of Abemaciclib or Anastrozole Alone or the Combination

Trial Identifier: NCT02441946

Enrollment: 148 (Closed)

Primary endpoint: Change in Ki-67 levels between baseline and after 2 weeks of therapy

HR pozitif, HER2 negatif Metastatik Meme Kanserinde Tedavi

monarchHER: A Phase II Randomized Trial of Abemaciclib in Locally Advanced or Metastatic BC

Trial Identifier: NCT02675231

Enrollment: 225 (Open)

Eligibility

- Postmenopausal
- HR+/HER2-positive breast adenocarcinoma
- Must have received:
 - Taxane
 - T-DM1
 - At least 2 anti-HER2 agents for advanced disease

R

Abemaciclib + trastuzumab + fulvestrant

Abemaciclib + trastuzumab

Trastuzumab + standard chemotherapy

Primary endpoint: Progression-free survival

HR pozitif, HER2 negatif Metastatik Meme Kanserinde Tedavi Nereye Gidiyor

neoMONARCH: Phase II study design

- ◆ Abemaciclib 150 mg BID is tolerable when dosed on a continuous schedule with endocrine therapy¹
- ◆ The most common adverse event has been diarrhea
 - ◆ Typically occurred within the first 7 days of treatment
 - ◆ Manageable with use of loperamide or dose reduction
- ◆ Loperamide was administered prophylactically for the first 28 days then at discretion of investigator

¹Patnaik A et al. *Cancer Discovery* 2016;6:740-5

HR pozitif, HER2 negatif Metastatik Meme Kanserinde Tedavi Nereye Gidiyor

neoMONARCH: Change in Ki67 expression and Ki67 response

- Study met the boundary for statistical significance at the interim analysis (boundary $p < 0.03$)

Abbreviations: GMR = geometric mean ratio, OR = odds ratio

^aGeometric Mean Ratio (GMR), 2-sided 90% confidence interval (CI), p-value. p-values are based on a one-sided hypothesis test from a linear model with treatment, PR status (positive versus negative/unknown) and tumor size (< 2 cm versus ≥ 2 cm and < 5 cm versus ≥ 5 cm) as fixed effects.

^bA responder is identified as a patient with a $\ln(\text{Ki67})$ value of less than 1. Odds ratio (OR), 2-sided 90% CI, p value. p-value is calculated by Fisher's Exact test of a one-sided hypothesis.
